

To whom it may concern:

I recently purchased an XM satellite radio for my automobile. I have been amazed by this new technology, with clear commercial-free content and local traffic and weather information. Just last evening, I was able to use the traffic information to divert my trip around a bad accident scene on our Bush Turnpike here in the D/FW area.

I have found that satellite radio provides variety and quality that are not available elsewhere. I pay for these services and I feel that it should not be up to the National Association of Broadcasters to dictate what I am permitted to hear.

Respectfully, I would urge the FCC to reject the NAB's recent petition 04-160 and to support XM's ability to provide this high-quality, commercial-free programming to my home and automobile.

Sincerely,
David Stringfellow
